## **SUHNER grinding wheels**

**Suhner is setting standards with new modern grinding wheels.**

### **Tigerbite – aggressive, yet smooth**

Ceramic grinding wheels are the ultimate solution for fast machining. The unique properties of the ceramic grain shorten machining times and extend the service life of the wheels.

Time is a crucial factor in today's working world, a factor that should not be ignored. With its new Tigerbite finned grinding wheels, SUHNER has launched an extremely efficient solution that presents not only convincing quality, but a convincing price.

Developed for effective machining on stainless steel! Thanks to the active grinding layer, you can now work at lower temperatures, which effectively eliminate damage to the surface like discoloration. Compared with conventional roughing or fibre wheels, the Tigerbite fin wheel makes work a much more pleasant and smoother experience. Its long service life saves you all the trouble of having to replace grinding wheels.

Whether abrasive grinding or finishing, the new SUHNER Tigerbite finned grinding wheel is your constant companion that will never let you down.

## **Vulcano – Innovative roughing wheel for curved surfaces**

The SUHNER Vulcano roughing wheel was developed specifically for machining curved surfaces.

Thanks to its unique vulcanised geometry, it adapts perfectly to all curved surfaces. It is therefore the preferred choice particularly on turbines and blades in power stations.

Featuring ceramic grains, this roughing wheel is a premium product with a removal rate and service life ideal for the maximum requirements. And with a thickness of only 4 mm, the Vulcano wheel is also one of the most flexible roughing wheels, promising very pleasant work. For maximised flexibility, the wheel can also be used with a backup pad.

True to its name, the Vulcano roughing wheel proves its lava like aggressiveness on both normal and stainless steels. It is therefore the ideal complement to the old established SUHNER Magic Disc product series, equal in every respect.

Our tip: The Vulcano roughing wheel serves as an ideal substitute for conical finned grinding pads for work requiring tool changes.

### **Demo Service directly on site**

Users can benefit from the mobile demo services provided by Suhner. This offers interested parties expert advice free of charge from experienced practitioners. The demo services vehicle carries all of the usual tools, attachments, and abrasives that can be used to realise individual end to end solutions for actual workpieces and to optimise the added value.
